1.1-

1.2-

Use case name	Employee Shift Assignment
Textual Description	The HR manager assigns employees to a specific shift.
List of Actors	HR Manager
Pre-conditions	The shift to which the manager wants to assign employees must be defined in the system.
Post-conditions	The details of the assigned employees are saved in the relevant shift.

Main success scenario

0. Trigger: Admin wants to assign employees to a shift
1. Admin starts from the "Admin" main menu
2. Admin opens the main menu for the HR module
3. Admin selects the option "Employee Shift Assignment"
4. Admin enters the shift date, time slot, and branch
5. The system presents the shift details, and a list of all employees with their IDs and roles
6. For each role presented, the admin enters a list of IDs of the employees they want to assign
7. The system saves the employees assigned to each role in the shift details
8. Admin is shown a confirmation that the operation succeeded

Alternatives/Extensions

4a. If the required shift does not exist, a corresponding error message is displayed and the system returns to the Admin main menu.

5a. If there are not enough available employees to fulfill the shift requirements, the system displays an alert.

6a. If the employee is inactive, the selected role does not match the employee's roles, or the employee is already assigned to another role, a corresponding error message is displayed and the system returns to the Admin main menu.

6b. If no shift manager is assigned to the shift, a corresponding error message is displayed and the system returns to the Admin main menu.

6c. If there is an incoming delivery scheduled during the shift and no storekeeper is assigned, or if there is an outgoing delivery during the shift and neither a driver nor a storekeeper is assigned, a corresponding error message is displayed and the system returns to the Admin main menu.
